

BaumInvest Reforestation Project in Biodiversity Hotspot Costa Rica

High-impact removal credits

BaumInvest is driving one of Costa Rica's most impactful reforestation projects – combining climate protection, biodiversity conservation, and social value.

Since 2007, BaumInvest has been delivering reliable, large-scale reforestation in Costa Rica – making us one of the most experienced actors in the global carbon credit market.

Our forests not only store large amounts of carbon but also produce valuable timber and restore vital ecosystems.

The project covers 1,538 ha in total, with 25% strictly protected as conservation areas. Strong site selection, private land ownership, and Costa Rica's tradition of democracy, stability, and environmental leadership ensure long-term security.

Since 2014, BaumInvest has been among the first reforestation projects worldwide to achieve Gold Standard certification, confirming our climate impact.

PROJECT KEY FACTS:

Project Type: Reforestation/Afforestation

Credits Type: Removal

Location: Costa Rica, northern tropical lowlands

Project Size: 1,538 ha

Verified emission reduction issued: 175,859 t/CO₂

Vintages available: 2022-2025

Certification: Gold Standard A/R Methodology 2.1

Project ID: [GS2913](#)

Rating: (p)BB rating by Sylvera* as of 19/06/2025

Gold Standard
for the **Global Goals**

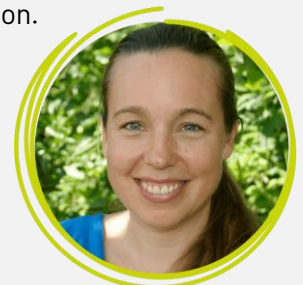

GET IN TOUCH:

Invest in carbon credits that go beyond offsetting—support resilient ecosystems, strong communities, and measurable climate action.

WHAT MAKES THIS PROJECT STAND OUT?

Carbon Removal, Not Just Avoidance

Unlike avoidance projects, reforestation actively removes carbon from the atmosphere and locks it in trees and soil.

Transparency at Every Level

Independent third-party audits guarantee our Gold Standard compliance, and our strong rating highlights the integrity and quality of our carbon credits.

Biodiversity Hotspot Impact

Costa Rica represents just 1.4% of Earth's surface but holds 6% of global biodiversity. Planting native and endangered species creates vital habitats, directly adjacent to UNESCO biosphere reserves and national parks.

Long-Term Security

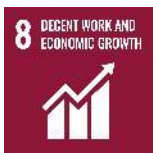

Private land ownership, strong national legislation, and rigorous risk management ensure durability and permanence.

OUR VALUE – YOUR IMPACT

We promote and live gender equality. Women already represent over 40% of the employees and board members.

We create long-term employment with working agreements and full board and lodging, safe equipment and continuous training.

We actively sequester carbon from the atmosphere through close-to-nature reforestation, independently verified.

We support biodiversity and ecosystem services by restoring forests with native tree species.

WHY CHOOSE BAUMINVEST CARBON CREDITS?

High Integrity: Gold Standard verified and Sylvera rated

High Impact: Climate, biodiversity, and communities

High Trust: BaumInvest has a long track record since 2007 in tropical reforestation. We are a German publicly traded company with own structures in project host countries.
